human and murine interleukin-IL1 (IL-IL1) proteins. The IL-IL1 gene is located between the IL-lbeta and IL-Irceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthitis, systemic lupus erythematosus, inflammatory bowel disorder, severe periodontal disease and pregnancy complications. The present sequence is the human IL-IL1 coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               720

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  60
                                                                                                                                                                                                                                                                                 Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         97
                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antegonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                38 AGGGGGGTCTACACCCTGTGGAGCTCAAGATGGTCCTGAGTGGGGGGGCGCTGTGCTTCCGAA

```
The invention relates to an isolated secreted and transmembrane PRO polyeptide having 80 % sequence identity to a sequence ageneric ages of the protein and the peptide.

CC ARG5581-ARG55934 or their associated signal peptide are associated signal peptide are associated signal peptide are associated signal peptide and its associated signal peptide. Also included are the nucleic acids encoding the proteins with their associated signal peptide and associated signal peptide as the proteins are antibodies which specifically bind to the proteins. The proteins are subsected of containing and A. B. C or D polypeptide. By c or D in a sample with a polypeptide designated as B. C or D in 10 tolypeptide and determining the presence of an A. B. C or D polypeptide in the sample, where he formation of a A/E. B/F. B/G. C/H or D/I polypeptide and determining the presence of an A. B. C or D polypeptide in the sample, where he is a PRO1950 polypeptide. B is a PRO1950 polypeptide or a PRO1950 polypeptide and I is a PRO1950 polypeptide. F is a PRO1950 polypeptide. F is a PRO1950 polypeptide. F is a PRO1950 polypeptide. The sample comprises a call suspected of expressing the A. B. C or D polypeptide to a support. The proteins are useful for linking a bioactive molecule causes death of the cell as the E. F. G. H or I polypeptide apport: The bioactive molecule causes death of the cell. A. B. C or D or E. F. G. H or I The bioactive molecule causes death of the cell. A. B. C or D or E. F. G. H or I The bioactive molecule is a toxin, a radiolabel or an arbibode; and a polypeptide designated as A. B. C or D or E. F. G. F. G. H or I The bioactive molecule is a propertion of the proteins are useful for activity of a cell expressing a polypeptide designated as A. B. C or D or E. F. G. F. G. H. Or I The bioactive molecule is a polypeptide designated as A. B. C or D or E. F. G. F. G. H. Or I The bioactive molecule is a polypeptide designated as A. B. C or D or E. F. G. F. Or D or E. F. G. H. Or I The bioactive molecule are development and arti
                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated secreted and transmembrane PRO polypeptide useful for modulating biological activity of a cell, or for treating sports-related joint problems, osteoarthritis or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                             Godowski PJ;

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB88003. The PRO proteins and polynucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic cactivities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88257 represent primers and probes used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        218 ATGCCAGCCTGTCCCCCGTCATCCTGGGTGTCCAGGGTGGAAGCCAGTGCCTGTCATGTG 277

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an antibody that specifically binds to a PRO polypeptide having a fully defined amino acid sequence given in the specification. The antibody is useful in identifying PRO polypeptides useful for various industrial applications, including pharmaceuticals, diagnostics, biosensors and bloreactors. The antibody is also used for affinity purification of PRO polypeptides from recombinant cell culture or natural sources. The antibody, PRO polypeptide, or its agonists or antagonists, may be used for preparing a medicament for diagnosing or treating a condition responsive to the antibody, PRO polypeptide, or its agonists or antagonists. This sequence encodes a novel human secreted and

New isolated antibody specifically binding a PRO polypeptide, useful for the preparation of a medicament for treating disorders with the aberrant expression or activity of the PRO polypeptide, such as tumor conditions and cancer.

Disclosure; Fig 151; 223pp; English.

The invention relates to an antibody that binds to a secreted or transmembrane protein designated PRO1446 appearing as ABO33941. The protein is one of 84 PRO polypeptides which (along with their encoding nucleic acids) are disclosed in the specification. The methods and compositions of the present invention are useful for the preparation of amedicament for the treatment of disorders associated with the aberrant medicament for the treatment of disorders associated with the aberrant and cancer. They can also be used to generate transgenic or knockout animals useful in the development and screening of therapeutically useful reagents. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for protein electrophoresis, chromosome identification and tissue typing. The antibodies may be used in various diagnostic, competitive binding and/or immunoprecipitation assays. The present sequence encodes a PRO polypeptide

The invention describes novel isolated PRO polypeptides. The PRO polypeptides or anti-PRO antibodies are useful in preparing a medicament contracting a condition that is responsive to the PRO polypeptide or antibody. The PRO nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating antisense RNA and probes in chromosome and gene mapping, or in generating antisense RNA and company to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knockout animals, which in the casents, for chromosome identification, and tissue typing. The PRO polypeptides and nucleic acid molecules are also useful in gene PRO polypeptides and nucleic acid molecules are also useful in gene PRO polypeptides and nucleic acid molecules are also useful in gene PRO polypeptides and nucleic acid molecules are also useful in gene PRO polypeptides and nucleic acid molecules are also useful in gene PRO, or for the affinity purification of PRO from recombinant cell PRO, or for the affinity purification of PRO from recombinant cell PRO, or for the affinity purification of PRO from recombinant cell purposes.

tully defined sequence given in the specification. The methods and compositions (containing antibodies that specifically bind as PRO compositions (containing antibodies that specifically bind as PRO compositions (containing antibodies that specifically bind as PRO colypeptide) of the present invention are useful for the preparation of a medicament for the treatment of disorders associated with the aberrant can cancer. They can also be used to generate transgenic or knockout and cancer. The PRO polypeptide, such as tumour conditions can cancer. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for protein electrophoresis, chromosome conditiotion and tissue typing. The PRO polypeptides are useful to induce angiogenesis e.g wound healing; in the treatment of sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis diabetes; hyperinsulinaemia and hypoinsulinaemia. The arthritis diabetes; hyperinsulinaemia and hypoinsulinaemia. The immunoprecipitation assays. The present sequence represents a cDNA encoding a PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         900

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel human PRO polypeptides and the polynuclectide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynuclectides are useful for preparing a medicament useful in the treatment of a condition responsive to anti-PRO antibody. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ACA63986-ACA64069 represent cDNA sequences encoding the human PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TGAAGGACTCGGCATTGAAGGTGCTTTATCTGCATAATAACCAGCTTCTAGCTGGAGGGC 120

                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of novel human PRO polypeptides, and the polymucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptide and polymucleotide sequences are useful for the diagnosis, prevention and treatment of rectal, lung, stomach, oesophageal or skin tumours, and/or cancers. The PRO polypeptides are also useful as molecular weight markers. The PRO polymucleotide sequences are useful for chromosome identification, hybridisation probes, and for screening libraries of particularly for replacing a defective gene. ACA91250-ACA91313 represent CDNA sequences encoding the human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

```
New isolated antibody specifically binding a PRO polypeptide, useful for the preparation of a medicament for treating disorders with the aberrant expression or activity of the PRO polypeptide, such as tumor conditions and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antibody that binds to a secreted and transmembrane PRO polypeptide. The methods and compositions of the present invention are useful for the preparation of a medicament for the treatment of disorders associated with the aberrant expression or activity of the PRO polypeptide, such as tumour conditions and cancer. They can also be used to generate transgenic or knockout animals useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ρ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Godowski
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ä

The invention relates to a new isolated PR0994 polypeptide comprises an amino acid sequence appearing as ABU92499, PR0994 lacking its associated signal peptide, the extracellular domain of PR0994, the extracellular domain of PR0994, the extracellular domain of PR0994 (lacking it associated signal peptide) or the protein encoded by the full-length coding sequence of the cDNA ATCC 203018. Also included is a chimaeric molecule comprising the PR0994 polypeptide fused to a heterologous amino acid sequence. The PRO polypeptide is useful in pharmaceuticals, diagnostics, biosensors or bioreactors. It is particularly useful for detecting tummours (e.g. lung tummour, colon tummour, breast tummour, prostate tummour, rectal tummour, or liver tummour) in a mammal, for stimulating the release of tummour necrosis factor (TNF) alpha from human blood, for stimulating the proliferation of pericyte cells, or stimulating the release of proteoglycans from cartilage. The polypeptide may be employed for a variety of therapeutic purposes, e.g. for treating cancer, wound healing, cartilage defects, osteoarthitis, theumatoid arthritis. Also disclosed are the cDNA encoding PR0994, 83 other PRO polypeptides and their encoding cDNAs. The present sequence encoding a PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       38 AGGGGAGTCTACACCCTGTGGAGCTCAAGATGGTCCTGAGTGGGGCGCTGTGCTTCCGAA 97

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an antibody that binds to a secreted and transmembrane polypeptide, PRO1136. The antibody is useful for preparing a medicament useful in the treatment of a condition responsive to anti-PRO antibody. The antibody is also useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents a cDNA encoding a PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                               New monoclonal antibody that binds to a secreted and transmembrane polypeptide, useful for detecting and purifying the polypeptide and also for treating conditions responsive to the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      97

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an isolated polypeptide having at least 80, 85, 90, 95 or 99% identity with: (a) a sequence having 46-335 amino acids, or its extracellular domain; (b) a sequence having 46-335 amino acids, lacking its associated signal peptide; or (c) an amino acid sequence encoded by the full-length coding sequence of the cDNA (ATCC accession number 209956). The PRO (secreted and transmembrane) polypeptide is useful for preparing a medicament for treating a condition associated with PRO polypeptide. This sequence encodes a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Godowski PJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRO polypeptide, useful for preparing a medicament for treating condition associated with PRO polypeptide.

COMMENT 1st strand cDNA was primed with a NotI-011go (dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned the control to the the test of the control of the contro
and the not 1 and book v sicks of the purvisions o vector. Dibiary was normalized. Library was constructed by Life Technologies, a

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODI013AA04NP1&c=1383.f. Location/Qualifiers

1st strand cDNA was ptimed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSDRT & vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecor V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSOBAI018ZD02_CS01644_2&c=1383.f

Nucleic acids encoding human and murine interleukin-1L1 polypeptides useful for controlling inflammatory processes.

Claim 20; Fig 1; 150pp; English.

The present invention provides the protein and coding sequences of the human and murine interleukin-ILI (IL-ILI) proteins. The IL-ILI gene is located between the IL-lbeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythematosus, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis,

The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New PRO nucleic acid or polypeptide, useful for preparing a pharmaceutical composition for diagnosing or treating psoriasis in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of the human and murine interleukin-III (IL-III) proteins. The IL-III gene is located between the IL-Ibeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic luque erythematous, inflammatory bowel disorder, diabetes, psoriamis, osteoporosis, lichen sclerosis, ulcerative colitis, severe periodontal disease and pregnancy complications. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; IL-IL1; interleukin-1 locus; IL-1beta; IL-1receptor; psoriasis; chromosome 2q13; inflammatory disease; heart disease; Graves' disease; rheumatoid arthritis; inflammatory bowel disorder; diabetes; cancer;
severe periodontal disease and pregnancy complications. The present sequence is one of two alternative 5' ends of the human IL-IL1 coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

High inhibitors are used in the method of the invention. The specification describes a method of inhibiting B-cell proliferation, activation or differentiation. The method comprises administering an activation or differentiation. The method comprises administering an inhibitor of IL-1My1 activity to a human with alevated B-cell levels or activity, in an amount that inhibiting B-cell proliferation induced by IL-1My1. The method is useful for inhibiting or stimulating B-cell proliferation, activation or differentiation in patients having a B-cell-related disorder (e.g. lymphoma, leukemia, myeloma or infection) or an autoimmune disease (e.g. allergy, asthma or allergy crhinitis), or in polypeptide, or the inhibitor of IL-1My1 activity, is useful in preparing a medicament for stimulating or reducing B-cell differentiation. The IL-1HY1 differentiation or activation. The IL-1HY1 polypeptide may also be used in preparing a medicament for reducing IgA production
                        present sequence encodes human interleukin (IL)-1Hyl polypeptide. IL-
inhihitors are used in the method of the invention. The

ô
human and murine interfeukin-ILI (IL-ILI) proteins. The IL-ILI gene is located between the IL-lbeta and IL-lreceptor genes at human chromosome 2413. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythematosus, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated interleukin-1 receptor binding polypeptides, used to treat e.g. sepsis, shock, arthritis, pancreatitis, graft-versus-host disease, inflammatory disease, autoimmune disease or proliferative disease.

The present sequence encodes a human interleukin-1 (IL-1) receptor antagonist. It is an extension of AA23052. The encoded polypeptide is capable of binding IL-1 receptors (IL-1RS). The polymucleotides and polypeptides can be used for the prevention or treatment of disorders involving sepsis, acute pancreatitis, endotoxic shock, cytokine induced shock, rheumatorid arthritis, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammatory bowel disease, inflammatory powel disease, inflammatory disease, other autoimmune disease or inflammatory disease, an antiproliferative agent such as for acute or chronic myelogenous leukemia antiproliferative agent such as for acute or chronic myelogenous cor in the prevention of premature labor secondary to intrauterine infections. They can also exhibit activities such as e.g. nutritional activity, cytokine and cell proliferation/differentiation activity, chemotactic/ chemokinetic activity, hemostatic and thrombolytic activity, receptor/ chemokinetic activity, hemostatic and thrombolytic activity, receptor/ ligand activity, and also be dispersed and activity of activity, receptor/ contents and activity activity. The products can also be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            원
```

The present invention relates to interleukin (IL)-1 receptor antagonist proteins. IL-1Hyl is useful for treating cancer, an inflammatory disease mediated by IL-18, inflammation resulting from infection or allergic reactions, and inflammation associated with chronic bronchitis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes human interleukin (IL)-1Hy1 polypeptide. IL-1Hy1 inhibitors are used in the method of the invention. The specification describes a method of inhibiting B-cell proliferation, activation or differentiation. The method comprises administering an inhibitor of IL-1Hy1 activity to a human with elevated B-cell levels or activity, in an amount that inhibiting B-cell proliferation induced by IL-1Hy1. The method is useful for inhibiting or stimulating B-cell proliferation, activation or differentiation in patients having a B-cell-related disorder (e.g. lymphoma, leukemia, myeloma or infection) or an autoimmune disease (e.g. allergy, asthma or allergic rhinitis), or in screening for compounds that modulate B-cell differentiation. The IL-1Hy1 activity, is useful in preparing a medicament for stimulating or reducing B-cell proliferation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     differentiation or activation. The IL-1HY1 polypeptide may also be used in preparing a medicament for reducing IgA production

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening of bioactive agent capable of binding drug candidates; (ii) for screening of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for reating; (x) for diagnosing carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma as Sasociated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eutaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Claim 1; SEQ ID NO 6838; 3071pp + Sequence Listing; English.

```
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
co supplement the patients own production of (I). Additionally, (I)
co polynucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-derived cells. AAK64703
concers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54912 to AAK64950 and AAM82169
crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Neuroprotective; cytostatic; dermatological; immunosuppressive; tumour; antiinflammatory; anti-HIV; antibacterial; antiinflammatory; cancer; immune system disorder; rheumatoid arthritis; inflammatory condition; organ transplant rejection; infection; hepatitis C; blood disorder; sickle cell anaemia; hyperproliferative disorder; Gaucher's disease; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; chromosomal abnormality; Down syndrome; ischaemia; renal disorder; cardiovascular; respiratory; wound healing; endocrine; Addison's disease; reproductive system; gastrointestinal; liver disorder; AlbS; ds; acquired immune deficiency syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                        Rosen CA,
```

The invention relates to novel isolated polypeptides (I), and polynucleotides (II). (I) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, blaschers, primary hemmatopoietic disorders, hyperproliferative disorders (e.g. Gaucher's disease and cancer), neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure, SEQ ID NO 36975; 3071pp + Sequence Listing; English.

AMX54951 to AAX64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM8110 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome concerns the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the patients and polynucleotides may be used to provent, characterism and polynucleotides may be used to provent, characterism and polynucleotides may be used to prevent, characterism and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, characterism and concern and cancer metastases of haematopoietic-related diseases, especially concerns and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84992 to AAK84950 and AAM82169 represent invention
